# Zaid Haris

Bangalore, India | +91 9844986882 | zharis4347@gmail.com | linkedin.com/in/haris-zaid | github.com/zharis76

## PROFESSIONAL SUMMARY

Computer Science graduate (B.Tech, Nov 2026) with experience in test automation, root-cause analysis and technical documentation. Created Python monitoring scripts that found regressions before release and recorded every defect and fix to keep audit-ready traceability. Looking for an entry-level IT infrastructure role to learn cloud, virtualization and systems administration.

## TECHNICAL SKILLS

- **Networking Fundamentals:** Basic understanding of TCP/IP, the OSI model and key networking concepts
- **Systems & Cloud Fundamentals:** Linux, operating systems, virtualization and cloud computing
- **Scripting & Automation:** Python, SQL, automated testing and validation
- **Troubleshooting:** Debugging, root-cause analysis, reproduction and re-validation
- **Documentation:** Technical documentation, test and defect logging, low-level design
- **Programming & Backend:** Java, FastAPI, REST-style APIs, Streamlit, Object-Oriented Programming, Data Structures & Algorithms

## PROFESSIONAL EXPERIENCE

**AI/ML Testing & Validation Intern — Algorethics Technologies, Bangalore** Jan 2026 – Apr 2026

- Built Python scripts that monitor live model versions, detect data and concept drift, and catch regressions before release.
- Presented the monitoring pipeline's low-level design during team design reviews.
- Worked with engineers to reproduce issues, find root causes of hallucination and fairness risks in deployed AI/ML outputs, validate behavior across datasets, and re-validate each fix.
- Maintained audit-ready documentation for a multi-engineer codebase by logging every test case, defect and fix, supporting hand-offs.

**Front-End Development Intern — Intriaz, Bangalore** 2024

- Ran A/B tests and recommended UI improvements to the product team, increasing user engagement by 20%.
- Built Power BI dashboards and integrated them into internal tools, enabling real-time monitoring of customer engagement and operational KPIs.

## PROJECTS

**AI Medical Health Chatbot** Python, FastAPI, Groq API, Vercel

- Built a FastAPI backend using Groq LLM APIs and deployed it on Vercel for real-time healthcare assistance.
- Integrated ethical AI safeguards to detect and respond appropriately to sensitive inputs.

**Financial Fraud Detection & Risk Scoring Platform** Python, SQL, Scikit-learn, Power BI

- Built a risk-scoring engine that auto-flags high-risk transactions, with real-time Power BI dashboards cutting manual fraud-review effort.

## EDUCATION

**Presidency University, Bangalore — B.Tech, Computer Science Engineering** Nov 2026

- **Coursework:** Data Structures & Algorithms, Software Engineering, Database Management Systems, Machine Learning, Artificial Intelligence

## CERTIFICATIONS

- Networking Basics — Cisco Networking Academy
- Machine Learning with Python — Infosys
- Microsoft Generative AI Program

## HACKATHONS

- **Winner, Smart India Hackathon (SIH) 2025** — Led a team to victory in a national-level government hackathon.
- **Finalist, PES University Hackathon** — Built a payment-fraud detection system in 24 hours.
